Stylesheet_pack_tag not working

Why what works won't work. Wicked_pdf_stylesheet_link_tag not working.

When you are configured in TRUE, we will see that it emits the CSS file also (and the source map): [Webpacker] hash: 1FAE6519A03D7182AC2B version: Webpack 4.46.0 Time: 893MS Built to: 07/02/2021 11:35: 49 Asset Times Trocks Names CSS / Application "N-CF683911.css 80 Application of bytes [Issued] [Immutable] Application CSS / Application" N-CF683911.css.map 188 APPLICATION OF Bytes [Emitted] [DEV] APPLICATION JS / APPLICATION-FAE78801CD0A245D8EAC.JS 126 KIB Application [Issued] [Immutable] Application JS / Application-FAE78801CD0A245D8EAC.js.map 139 KIB Application [Emitted] [dev] Application manifest.json 640 bytes [emitted] Tambi © N, if we compile assets manually for production using rails env = Production rails assets: Precompile, we can see that it does not only emit the CSS package, but adds compressed versions using Brotli and GZIP to optimize the size when the browser Download the assets: hash: eee1e7c3239c83d7ca88 version : WebPack 4.46.0 Time: 2852MS Built at: 02 / 07/2021 11:28:53 Asset Size Chunks CSS Parts / Applications ON-00551F1A.css 20 bytes 0 [Emitted] [Immutable] Application [Immutable] JS / Application-91581966B20673BF924A.JS 69.5 KIB 0 [Issued] [Issued] APPLICATION JS / Application "N-91581966B20673BF924A.JS.BR 15.4 KIB [Issued] JS / Application- 91581966B20673BF924A.JS.GZ 17.8 KIB [Issued] JS / Application-91581966B20673BF924A.GS.MAP 205 KIB 0 [Issued] [dev] Application JS / Application-91581966B20673BF924A.JS.MAP.BR 43.9 KIB [Issued] JS / Application-91581966B20673BF924A..Map.gz 51 KIB [issued] Manifest .KSON 494 bytes [emitted] manifest.json.br 157 bytes [emitted] manifest.json.gz 170 bytes [issued] This comes utile when trying to debug problems in production. The problem with this is that Webpack will emit a package for each of the files you find in that directory and it is something we do not want to do in general. (); Import ". / javascript / debugging"; // We import a file from outside 'Packages' with' ...' // Console.log ("Hello World"); Now we must see Hello World in the browser console using the Devols. Another change we have to make is in the application application file.html.erb, is using stylesheet_link_tag, but with WebPacker, we want to use the Stylesheet Pack tag assistant. We will use a structure similar to piñones, so any additional personalized JS file will be in the application / assets / javascript. We will use the application / assets to store all our assets instead of the application / JavaScript, but we will do so in the following section. Cleaning the new application Interestingly, there are some files and code related to sprockets that are still created, so we need to eliminate them. The App / Assess folder contains: Config / demonstrations.js (a setup file for piñones) and stylesheetsheets / application.css contains the comments and the declarations require the piñones. To represent an IMG tag with Rails helpers, we have two options: image_tag + asset_pack_path If we want to use the Assistant ComAN TAG, we can not reference the name of the image as we do with the piñones, we need to use a Webpacker helper for Get the correct route from the file: image_tag asset_pack_path (means / images / cat.jpg) The media is the directory where the non-CSS / JS assets are issued, you can verify that with the output of the console. Import CSS within JS Another option is Import the CSS file within our Application.js package. You registered in another tab or window. We will use this option for the rest of the article. The generated header is
